MARINE WATER STATIONS

The Webasto Water Station acts as a central unit for the heating of the vessel's warm water heating system (such as radiators & fan heat exchangers). Additionally, domestic warm water is heated on demand using a Webasto Calorifier. The switching from central heating to domestic warm water heating is done automatically.

Please note that due to the specialist nature of these products, pricing will be provided upon application

MARINE AIR CONDITIONING SYSTEMS

Webasto now offer a full comprehensive range of Marine Air Conditioning System within it's product portfolio.

Due to the diverse nature of installations, pricing for suitable systems are available upon request.

The **Blue Cool Classic** self-contained air conditioning systems provide the perfect answer for boats with one to three cabins.

Ideal for retro-fitment, the range comprises eight models with cooling capacities from 1.5kW to 8.8kW.

Each model is simple to install, automatic in operation, contains an environmentally friendly refrigerant and dehumidifies as it cools. All construction is from salt water-resistant materials, so low maintenance is an additional bonus.

Larger yachts and power cruisers will require the **Blue Cool Premium** chiller/water range.

These comprise a central cooling unit that cools water, which is then distributed via a pipe network to a fan-type heat exchanger in each cabin. Electronic climate controllers enable the luxury of being able to select individual temperatures throughout the vessel.

The twelve-model range includes systems capable of cooling outputs from 3.5kW to 14.6kW, plus the convenience of reverse cycle heating if required.

Larger units with capacities up to 150kW are available on request. Pricing for suitable systems are available upon request.

Prices are excluding VAT and carriage E & OE

MARINE ROOF SYSTEMS

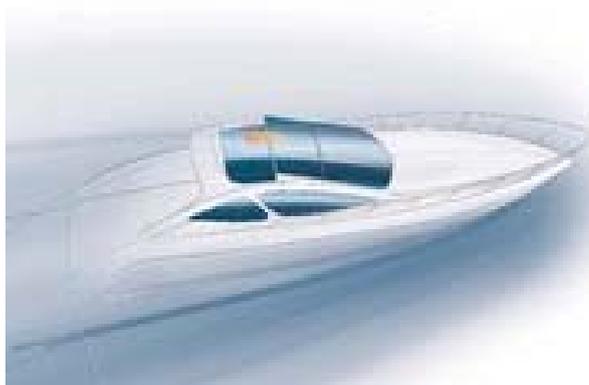

Webasto has been manufacturing premium quality roofs for the automotive industry for over 50 years and are still the worldwide leader when it comes to sunroofs or retractable hardtops. Now we have brought this expertise into the marine market, and you can profit from it!

Webasto offers high quality roof systems to provide passengers with the best possible light and air on board. We are matching our expertise and knowledge acquired in 50 years of **automotive experience** with the latest **marine requirements** to provide customers and OEMs with top quality solutions for their boat or yacht.

Our customisable products allow our customers to create a **personalised roof with nearly no design constraints**.

We can offer a whole service range, starting with the customisable Hollandia Marine Sliding Roof, **one of the largest roof systems on the market and of outstanding flexibility**, up to completely customer specific roof projects, where only the imagination sets the limit.

Pricing for suitable systems are available upon request from our Sales Office.

Isotemp Basic

Isotemp Basic has an exclusive look, with its brushed stainless steel cover, but most important is the internal design. The highest capacity is achieved by the engine water heat exchanger as well as the immersion heater placement. They are positioned in the lowest part of the tank where the water is coldest, to really heat all the water in the tank, which grants an outstanding volume of hot water. The water in and outlets are also designed for a minimal mixing of cold water into the hot, by the incoming water. The selected materials are all the best; tank, tubes and all materials in contact with the water are made of acid proof stainless steel AISI 316 and welded with protection gas to eliminate any risk of corrosion. Each water heater is individually leakage tested to 16 bar/230 psi, before delivery.

Isotemp Slim

Isotemp Slim is a range of water heaters, available in three sizes, 15, 20 and 25 litres. Isotemp Slim has an exclusive look and design, with brushed stainless steel cover. The highest capacity is achieved by the engine water heat exchanger, as well as by the immersion heater mounting. They are positioned as low as possible inside the tank to heat the water where it is coldest.

Isotemp Slim Square

Webasto Indel Marine has introduced a slim line, box style water heater to its range, which has been designed for easy installation in narrow spaces on board. The Isotemp Slim Square has a 16 litres capacity, quick and effectively heats water up via the boat engine or by the electrical heater element if the boat is connected to shore power. The water is heated to above 70°C which enables water to be heated on board at the correct levels from both hygiene and safety purpose.

It can be installed in a variety of positions, making it more versatile than standard models currently available. As with all Isotemp water heaters, the Isotemp Slim square has been constructed with a robust acid proof stainless steel (AISIS 316) and fitted with special components to protect it from overheating. All electrical installations are factory made and delivered with a cable and plug.

EVAPORATIVE COOLER SYSTEMS

Evaporative Cooler Systems freshen the atmosphere through a simple and efficient system: a pump supplies water to the evaporator unit. The evaporator system cools the fresh air flowing in from the exterior before it reaches the interior. The unit is mounted on top or rear side of the driver's cab, so that the cooling system runs particularly effectively and directly, both in the evenings and during the day.

WEBASTO THERMODUCT

Webasto Thermoduct is constructed using market leading Thermal Insulation Material. The material is stitched into 750mm long tubes and is designed to slide directly over warm air ducting, providing exceptional thermal insulating properties.

- Temperature Resistant up to 40°C
- Hydrophobic – actually repels water, thus preventing mould & mildew
- Hypoallergenic
- Easy to handle
- Can double the effective heat output from air heaters by minimising ducting heat loss
- Allows long ducting runs to provide effective heat output
- Reduces heater running times, improving fuel and electrical power consumption
- Reduces external duct temperature from circ. 100° to 30°C
